The Denver Exposition.

PRESOTT, May 26, 1882.
Whereas, It is proposed by the citizens of Colorado to hold a mining exposition in the city of Denver, to be opened in August, 1882; and

Whereas, An invitation has been extended to the people of Arizona to participate in the same, and present for exhibition specimens of their various minerals, mining machinery, etc.; and

Whereas, The Executive has reason to believe that the several railroads passing through Arizona, New Mexico and Colorado, will transport all ores free of charge to said Denver; and

Whereas, It is most especially important that arrangements be perfected looking to Arizona's proper representation.

Therefore, I hereby request that the citizens of the several mining districts throughout the Territory, hold a meeting on or before June 16, for the purpose of selecting a suitable person who shall be commissioned by the Executive of the Territory to make a full and complete survey of the Territory, ascertain the assay value and character of the same, prepare suitable cases in which the same may be placed in the department set aside for Arizona, and ship to the nearest point on the railroad to be taken and transported to Denver.

The representative appointed to be present at the exposition to take charge of the mining district he represents. The Executive will also appoint one commissioner, whose duty it shall be to secure suitable accommodations from the proper authorities controlling the exposition, and to allot to each representative from the Territory his proper space, and to generally supervise and report upon the conduct of our representation.

The Executive of this Territory is without funds under his control, by which the expenses connected with the arrangement for conduct of said exhibition by the Territory can be paid.

The several mining districts are therefore most respectfully requested to provide the necessary means to enable their representative to carry out the objects of this address.

The press of Arizona are most earnestly asked to publish this address until the 30th day of June, 1882. Most respectfully presented by

F. A. TITILE, GOVERNOR.

Denver Mining Exhibition.

Arrangements have been made for holding at Denver, Colorado, in the month of August, 1882, the first exhibition ever organized in America principally for mining machinery, ores, products of mills, smelting works and other establishments connected with the mining industry. The plan of the exhibition has been received with great favor, and it is already certain that the most important and valuable collection of ore, machinery and reduction products ever gathered in the United States will be present. The American Institute of Mining Engineers, which numbers among its members more than one thousand of the leading mining men in America, will hold during the exhibition its first meeting west of the Mississippi river. In every respect this exhibition and the gathering of prominent men to which it will give rise will be important to Western mining interests, which will receive the principal attention both in the exhibition and the meeting of the engineers. Arizona cannot afford to pass this favorable opportunity without energetic action. Much of our remarkable mining resources deserve attention and development, they will not receive it unless we bring them to the knowledge of the world at proper times and places. The Denver Exposition is the best time and place which has been afforded since the beginning of mining in Arizona. For the purpose of producing concerted action on the part of Arizona mining men, his Excellency, Governor Triffin, has issued an address to the people, in which he calls upon the residents of each mining district to choose a representative before the 16th day of June, and he has also appointed me Commissioner for the whole Territory. Under this commission I hereby notify all District Commissioners that collections of ores and other exhibits should be sent properly packed and charges prepaid to one of the following points: Yuma, Maricopa, Tucson, Benson, Wilcox, Bowie, in time to be at the railroad station before July 15th. As to the kind of exhibits desired this is necessarily governed by the character of mining resources in the Territory. Arizona

ZAMLOCH'S ASSISTANT.

The Tribulations of a Magician. When Zamloch, the popular magician, was in San Francisco some time ago, says the *Laramie Boomerang*, he was short an assistant, and, as he had no engagement at the Standard Theater, he had to skiff around and get one on short notice.

Fate threw in his way a man whom we will call Higgins, because that was his name.

Higgins walked over to the magician's house and went through several rehearsals O. K., but at about a quarter of 8 in the evening, while the circle of assistants was playing, he told Zamloch that he was so near-sighted that he couldn't tell across the street the difference between a black tom cat and the solar eclipse.

This seemed to throw a shade of sadness over the mind of the conjurer, for the assistant in a performance of this kind has got to be a man with every sense on the alert, and with a touch at once delicate and certain. It won't do to go across the stage like a blind mule, falling over chairs and knocking a choice illusion gallery west every few minutes.

The man who can't see ten feet with any degree of accuracy is liable to mar the magic of a choice performance, and the audience will see that, instead of being a success, the trick is a failure.

Just as the curtain rang up, Higgins came back with his goggles and was unseated. He got along pretty well until there was a illusion introduced in which the magician took a bird cage and a lot of other furniture out of a portfolio, bring on the table, winding up by picking a live boy out of the volume.

The portfolio lay on an ordinary table, and Zamloch had cut a trap door underneath it, and provided Higgins, who was a little lame, with a short ladder. Upon a given signal the assistant was to open the trap, and, showing up the ladder, send the boy through the table, the magician then taking him out of the portfolio to slow music and deafening applause.

Zamloch had taken out just before four or five large lithographs, and stood them up, carefully like, against the legs of the table, when he gave the signal and to his assistant to job the boy through the floor and table into the portfolio.

Higgins, whose eyesight was about as good as that of a plaster cast of Milton, rammed the ladder up against the lithographs and knocked them down, so that the most attractive feature of the illusion, the dissolving view of a freckled-nosed boy slipping up a \$2 ladder through the trap-door.

Most everybody in the theater seemed pleased about something except Zamloch and his boy. The utmost good feeling seemed to reign throughout the audience.

Zamloch, however, seemed to have a preoccupied and far-away look. Higgins, too, seemed to feel in a bad way. Perhaps he might have made a mis-slick somehow.

The boy thought the spectators were laughing at the red flannel conclusion of the trick, which in the excitement of the moment he had not time to become disarranged, and was at that moment in perilous with the risk of his paymaster.

Zamloch said he would conclude the entertainment with a mirth-provoking illusion, in which he would ram a full-grown man into a double-barreled shotgun and shoot at a mark. No one in the audience apparently hankering for the notoriety, the magician decided to use Higgins.

Higgins has not been seen in California since then, and the janitor, who found a large part on which he had been covered during the trick, said that there has been foul play somewhere.—*Boomerang*.

Not Healthy.

A rather rosy-looking customer came into a restaurant on Austin avenue, and said to the proprietor: "What do you ask for a nice cooked breakfast, well done, with onions?" "Twenty-five cents," and the gray "Oh, we with me charge anything for the gray."

"You don't? That's liberal. How much do you charge for bread?" "We throw in the bread." "Is it good bread?" "It is." "Then you throw in bread and gravy?" "Certainly." "Then bring me some bread and gravy. It's not healthy to eat meat in summer."

PAPER COLLIES ARE COMING IN.

Underground Life in England.

The discussions about the Channel tunnel, and as to the probability of its being generally used by passengers when made, have prompted inquiry into the extent of underground roadways already existing in Great Britain, and the number of persons in the country who are habitually employed at a much greater depth beneath the surface than that to which travelers under the Straits of Dover would have to descend. The number of persons employed underground in all the mines in Great Britain is 378,151. The length of underground tunneling in which they work is not less than 58,744 miles. This is the estimate of Messrs. Higson, the mining engineers.

As regards depth, the channel is nowhere deeper than 150, and the lowest part of the tunnel would be not below 200 feet from the surface, or 604 yards. The greatest depth of the underground tunnels connected with our coal and other mines is about 2,800 feet, and probably the smallest depth 300 feet. From an engineering point of view, then, the question of the channel tunnel seems to be one of adding, roughly speaking, only one-thirtieth of 1 per cent to the existing underground passages.—*Scientific American*.

JOHN A. CHURCH, Mining Exposition, Denver, Colorado.

Abstention of Camels.

The watering of camels is of great importance, and is not generally understood. Surgeon C. Reed states that "the store of water the animal is supposed to be capable of carrying is much exaggerated." I am anxious of this opinion, for I could not help observing in the recent Afghan campaign how little attention was paid to the watering of camels, because the idea entertained was that camels could go forever without drinking. Such a false impression was fatal to the poor animals. Camels of the Arabian species can take in five or six gallons of water, which is sufficient for their use for about six days. The Egyptian species can take in only about half that quantity. To insure this supply, camels, traveling with their own camels, are not watered down the canal's throat, which the camels understand by instinct to be a necessary precaution, and take in the water willingly. It is misleading to say that a camel can go without water longer than any other animal, for he can quench daily, like other beasts, if a supply has not been previously administered. Camels have, moreover, a great dislike to drinking cold running water in cold weather, and should be watered from holes or tanks containing still water.

MEMBERS OF OUR American native birds are being exported to Europe. We can notify all District Commissioners that collections of ores and other exhibits should be sent properly packed and charges prepaid to one of the following points: Yuma, Maricopa, Tucson, Benson, Wilcox, Bowie, in time to be at the railroad station before July 15th. As to the kind of exhibits desired this is necessarily governed by the character of mining resources in the Territory. Arizona

It rains twice as often in Western as in Eastern Europe.

FOREIGN AND DOMESTIC Wines, Liquors, Cigars ETC. ETC. ETC.

Fancy drinks of every description a specialty. Come Where you can get a metropolitan drink at a metropolitan price.

J. V. WILSON, Prop'r.

Remarkable Escape.

John Kuhn, of Lafayette, Ind., had a very narrow escape from death. This is his own story: "One year ago I was in the last stages of consumption. Our best physicians gave me up. I finally got so low that our doctor said I could not live twenty-four hours. My friends then purchased a bottle of Dr. Wm. Hall's Balsam for the lungs, which benefited me, I continued until I took nine bottles. I am now in perfect health having used no other medicine." From the above it is plainly evident that some time ago he was in the last stages of consumption, even in the most hopeless cases, and that cure is Dr. Wm. Hall's Balsam for the lungs. Cures all coughs and colds. Cures all diseases of the lungs and chest. Cures pneumonia and pleurisy, and is a sure cure for consumption, if taken in season.

Just as the curtain rang up, Higgins came back with his goggles and was unseated. He got along pretty well until there was a illusion introduced in which the magician took a bird cage and a lot of other furniture out of a portfolio, bring on the table, winding up by picking a live boy out of the volume.

The portfolio lay on an ordinary table, and Zamloch had cut a trap door underneath it, and provided Higgins, who was a little lame, with a short ladder. Upon a given signal the assistant was to open the trap, and, showing up the ladder, send the boy through the table, the magician then taking him out of the portfolio to slow music and deafening applause.

Zamloch had taken out just before four or five large lithographs, and stood them up, carefully like, against the legs of the table, when he gave the signal and to his assistant to job the boy through the floor and table into the portfolio.

Higgins, whose eyesight was about as good as that of a plaster cast of Milton, rammed the ladder up against the lithographs and knocked them down, so that the most attractive feature of the illusion, the dissolving view of a freckled-nosed boy slipping up a \$2 ladder through the trap-door.

Most everybody in the theater seemed pleased about something except Zamloch and his boy. The utmost good feeling seemed to reign throughout the audience.

Zamloch, however, seemed to have a preoccupied and far-away look. Higgins, too, seemed to feel in a bad way. Perhaps he might have made a mis-slick somehow.

How to secure health

It is strange any one will suffer from derangements brought on by impure blood, which SCOTT'S EMERALD AND STRENGTHENING BLOOD AND LIVER SYRUP will restore health to the physical organization. It is a strengthening syrup, pleasant to take, covers the throat with a rich, velvety, ever-durable covering, and cures all ailments, such as weakness of the kidneys, erysipelas, malaria; nervous disorders, debility, bilious complaints and diseases of the blood, liver, kidneys, stomach, etc.

Dr. DeWitt C. Kellogg's Kidney and Bladder Syrup, an infallible cure for rheumatism, sprains, amnesia, and diseases of the scalp, and for promoting the growth of the hair.

Rescued from Death.

William J. Coughlin, of Somerville, Mass., says: "In the fall of 1876 I was taken with bleeding of the lungs followed by a severe cough. I lost my appetite and flesh, and was confined to my bed. In 1877 I was admitted to the hospital. The doctors said I had a hole in my lung as big as a half dollar. At one time a report went around that I was dead. I was lying on my back, and a friend told me of Dr. WILLIAM HALL'S BALSAM FOR THE LUNGS. I got a bottle, and to my surprise, I commenced to feel better, and to-day I feel better than for three years past."

"I write this hoping every one afflicted with diseased lungs will take Dr. WILLIAM HALL'S BALSAM, and be convinced that CONSUMPTION CAN BE CURED. I can positively say it has done more good than all the other medicines I have taken since my sickness."

Important Notice—Words of Warning.

We desire to give this friendly word of warning to whom it may concern, that all persons who have been, or are now dealing in a preparation called "Bayer's" or "Rue's" Stomach Bitters, put upon the market by Adams & Co., of New York, render themselves liable to prosecution and damages, as said article has been pronounced by the U. S. Circuit Court, Southern District, New York, in a decision rendered by his Honor, Judge Blackford, February, 1882, as being an imitation of Hostetter's celebrated Stomach Bitters, and who granted a decree of perpetual injunction with damages, against the said Adams & Co. for violation of our trade mark in the premises. The principle of this important decision applies with equal force to any article of bitters, the labels of which bear a general resemblance to our trade mark, as well as to the refilling of our old bottles with spurious stuff, or preparation, and hence this friendly word of caution. We never fail to convict, as the country records of New Orleans, St. Louis, New York and other points fully affirm. Hostetter & Smith, Pittsburg, March, 1882.
